If you don't follow George McGeechi in Metadata Junkie, you should be. George has just completed a book with Steve Hoberman, Data Modeling Made Just With PowerDesigner. We had Steve to do modeling training a few years ago and he worked mostly with ERWin at the time, so I'm glad to see that he hugged PowerDesigner. I can't wait to get my copy. Free Data Modeling Made Simply with PowerDesigner Book by Steve Hoberman.Data Modeling Made Simply with PowerDesigner by Steve HobermanSynopsis: Data Modeling Made Simply with PowerDesigner will provide a business or IT professional with practical working knowledge about data modeling concepts and best practices, and how to apply these principles with PowerDesigner. You'll build many PowerDesigner data models along the way, increasing your skills first with the basics and then with the more advanced PowerDesigner feature. This book combines real experience and best practices to help you master the following ten goals: This book has ten key goals for you reader: 1. You'll know when you need a data model and which PowerDesigner models are most appropriate for each 2 situation. You will be able to read a model of data of any size and complexity with the same confidence as reading Book 3. You'll know when to apply and how to use all the key Features of PowerDesigner 4. You'll be able to build, step by step in PowerDesigner, a pyramid of related data models, including a conceptual data model, a fully normalized relational data model, a physical data model, and an easily navigable measuring model 5. You can use methods such as indexing, conversion, and forward engineering to turn a logical data model into an effective physical design 6. You'll improve data management and modeling consistency in your organization using features such as PowerDesigner, Glossary reference models, domains, and model comparison and model 7 display methods. You'll know how to use dependency and traceability links to assess the impact of change 8. You'll know how to integrate PowerDesigner models with externally controlled files, including importing and exporting data using Excel and Requirements 9 documents. You'll know where you can use the entire powerDesigner model to increase the success rate of corporate initiatives such as business analytics and enterprise resource planning (ERP) 10. You'll understand the key differences between PowerDesigner and other data modeling tools that you may have used before this book contains seven sections: Section I represents modeling along with its purpose and variations. Title II explains all components of the data model entities, data elements, relationships, and keys. It also includes a discussion of the importance of quality names and definitions for your objects. Title III explains the importance of data modeling tools, the key features of any data modeling tool, and the introduction to the core functions of PowerDesigner. It also describes how to create and manage data modeling objects in PowerDesigner. Section IV presents a pyramid of the data model, then dives into relational and dimensional subject areas, logical and physical data models, and describes how PowerDesigner supports these models and the connections between them. Section V guides you through creating your own data model pyramid. Section VI focuses on additional PowerDesigner features (some of which have already been introduced) that make life easier for data designers. Learn how to get information in and out of PowerDesigner, and improve the quality of your data models with a cross-reference to key PowerDesigner features with data model Scorecard®. Section VII explores PowerDesigner themes other than data modeling, including the XML physical model and other types of models available in PowerDesigner.
